Germany NOT warming since 1750!

[chefio](#) has an interesting article (really an eye-opener) on temperature anomalies in Germany since 1750: using only freely available **unadjusted** (!) NOAA/GHCN data one finds this (I made the graph done from a table of all german thermometers available given by chefio):

[Comment](#) [Reblog](#) [Subscribe](#) [...](#)

The blue trend line shows a cooling of approx. 0.25 °C, and the red trend line says that the change rate of the yearly anomaly is flat! This should be quite a shock to many german (and luxembourg) environmentalists !

Well, Germany is not the World; but I remember well that “Am deutschen Wesen soll die Welt genesen”; so despite having had one of the most important industrialization in the world, this human impact does not show up as a warming! **Really shocking!** Quick, let’s do some good felt homogenizing to correct this inconvenience.
